Three Products in One!

When we originally launched **3D eBook Shot**, we made the decision to produce a

spec machines.

HD

separate product for the software market called **3D Box Shot**. While

both of these programs were based on the same engine, as development continued, they began to drift apart. This resulted in both products becoming harder to maintain. When we decided to produce a third product for making 3D Mug images, imaginatively called **3D Mug Shot**, it occurred to us that it would make much more sense to bring all three products under one roof. As a result, when you purchase either **3D Box Shot** or **3D eBook Shot**, you'll actually be buying **3D Pack Shot**. **3D Pack Shot** includes **3D Box Shot** as well as **3D eBook Shot** and **3D Mug Shot** at no extra cost. It really is three programs for the price of one!

Why doesn't 3D eBook Shot have built in design tools so I can design my own ebook cover shots?

3D eBook Shot is primarily a tool for designers to help them create 3D Images and videos of their art work. It doesn't have any pretensions to be Adobe Photoshop. Unless you have already designed your packaging then 3D eBook Shot won't help

you. But this isn't a bad thing. The sort of woefully inadequate, half baked design elements included in some eCover products just result in bland looking boxes that look painfully amateur. Competent designers would run mile from such things. Presenting an amateur looking cover shot to your customers is far worse than having no eCover shot at all.

At best, such products perpetuate the idea that good design is somehow irrelevant to online sales, at worst they result in horrible looking product images that would make anyone with a modicum of taste run screaming to the hills. Leave design to the designers. Good design isn't expensive, so don't cut corners where the whole world can see it. If you are considering designing your own packaging, at the very least, you need a layer based image editing tool like Paint Shop Pro, Photoshop or the Gimp. Some rinky dink ebook cover design package isn't what you need if you're serious about sales.
